Spectrum Management for mobile communication

Objectives:

This course considers the history and technical evolution of mobile telecommunications before moving on to cover the core functions of the spectrum manager. Participants will learn about how spectrum is used, the characteristics of spectrum bands and the progression of mobile technologies.

The course also covers the principles of spectrum planning at national and international levels and includes a deep dive into spectrum licensing and an overview of regulatory issues related to spectrum.

- Understand the processes and approaches to spectrum allocation and licensing.
- Learn how spectrum management is changing in the ever-evolving communications sector.
- Understand how the concepts can be applied to the spectrum conditions in your own country.
